LexFire Burn System™

Exclusive LexFire Burn System - combines all of the elements of a real wood fire to produce flames so realistically, you will forget it is not a real wood fire

Realistic Logs - starting with hand carved samples that are perfectly proportioned to fit the firebox size and viewing area and then color enhanced to match real wood

Yellow Flames - bright yellow flames appear almost translucent in color

Log Glow - as log surfaces heat up they produce a bright reddish orange glow, similar to wood in the secondary stages of combustion

Ember Bed - 72 square inches of burning ember replicate the look of wood in the final stages of combustion

LexFire Burner - gas and oxygen are precisely metered and strategically distributed to provide optimum flame presentation
